Projekt bazy danych platformy streamingowej typu Spotify

---

1. Podstawowe założenia projektu

1.1 Cel projektu

Celem projektu jest stworzenie relacyjnej bazy danych służącej do zarządzania informacjami związanymi z działaniem platformy streamingowej typu Spotify.

Baza danych umożliwia przechowywanie oraz analizę danych dotyczących użytkowników, artystów, utworów muzycznych, podcastów, subskrypcji oraz historii odsłuchań.

Projekt ma na celu zapewnienie spójnego, czytelnego i skalowalnego modelu danych, który może stanowić podstawę do dalszej rozbudowy systemu.

1.2 Główne założenia

- Projekt opiera się na relacyjnym modelu danych.
- Informacje przechowywane są w osobnych tabelach powiązanych za pomocą kluczy obcych.
- Zastosowany model zapewnia integralność oraz spójność danych.
- System umożliwia rejestrowanie historii odsłuchań, co pozwala na analizę aktywności użytkowników w czasie.
- W bazie danych uwzględniono różne typy odtwarzanych treści: utwory muzyczne, podcasty oraz reklamy.

---

2. Możliwości systemu

Baza danych umożliwia:

- zarządzanie użytkownikami platformy oraz ich danymi,
- obsługę subskrypcji użytkowników (typ, czas trwania, status),
- przechowywanie informacji o artystach, albumach i utworach muzycznych,

- zarządzanie podcastami, ich kategoriami oraz odcinkami,
- rejestrowanie historii odsłuchań wraz z informacją o urządzeniu i typie treści,
- analizę popularności treści na podstawie liczby odsłuchań,
- śledzenie aktywności użytkowników na platformie.

---

3. Struktura bazy danych

3.1 Moduły systemu

Baza danych składa się z logicznie podzielonych modułów:

- użytkownicy i subskrypcje,
- muzyka (artyści, albumy, utwory),
- podcasty,
- reklamy,
- historia odsłuchań.

3.2 Relacje wiele-do-wielu

Relacje typu wiele-do-wielu zostały zrealizowane za pomocą tabel pośrednich, m.in.:

- SongCreators,
- AlbumCreators,
- FollowsArtists,
- FollowsPodcasts.

Takie podejście eliminuje redundancję danych i zapewnia poprawną normalizację.

---

4. Ograniczenia projektu

- Historia odsłuchań zapisywana jest w postaci szczegółowych rekordów, co przy bardzo dużej skali systemu mogłoby wymagać archiwizacji starszych danych.

- Projekt nie obejmuje zaawansowanych mechanizmów personalizacji treści, takich jak systemy rekomendacji.
- Model subskrypcji został uproszczony do podstawowych informacji dotyczących czasu trwania oraz statusu subskrypcji.
- Baza danych nie uwzględnia mechanizmów rozliczeń finansowych ani integracji z zewnętrznymi systemami płatności.
- Projekt nie zakłada częstego usuwania danych – system został zaprojektowany głównie do ich przechowywania i analizy.

---

5. Pielęgnacja i utrzymanie bazy danych

5.1 Aktualizacja danych

- Regularne dodawanie nowych użytkowników, utworów muzycznych, podcastów oraz reklam do bazy danych.
- Aktualizacja informacji dotyczących subskrypcji użytkowników (status oraz daty obowiązywania).
- Uzupełnianie historii odsłuchań w miarę korzystania z platformy przez użytkowników.

5.2 Kopie zapasowe

- Regularne wykonywanie kopii zapasowych bazy danych (np. codziennych lub tygodniowych) w celu zabezpieczenia danych przed utratą.
- Przechowywanie kopii zapasowych w bezpiecznej lokalizacji niezależnej od głównego systemu.
- Możliwość odtworzenia bazy danych do stanu sprzed awarii lub błędu użytkownika.

5.3 Optymalizacja

- Monitorowanie wydajności zapytań, w szczególności dotyczących historii odsłuchań oraz analiz statystycznych.
- Regularna analiza oraz aktualizacja indeksów (automatycznych i projektowych) w celu zapewnienia wysokiej wydajności systemu.
- Archiwizacja starszych danych historii odsłuchań w przypadku znacznego wzrostu wolumenu danych.

5.4 Bezpieczeństwo

- Ograniczenie dostępu do bazy danych wyłącznie do uprawnionych użytkowników systemu.
- Rozdzielenie ról użytkowników (np. administrator, analityk, użytkownik systemu).
- Ochrona danych użytkowników, w szczególności danych osobowych, przed nieautoryzowanym dostępem.

- **Indeksy unikalne (UNIQUE):** ograniczenia unikalności (np. Username, Email, nazwy słowników) powodują utworzenie indeksów unikalnych, zapobiegających duplikacji danych.

- **Tabele pośrednie:** klucze główne złożone w tabelach relacji wiele-do-wielu tworzą indeksy przyspieszające weryfikację powiązań.

- **Indeksy projektowe:** zaprojektowano indeksowanie kluczy obcych oraz pól używanych w analizach (np. UserID, MediaID, PlaybackDate) w celu usprawnienia zapytań analitycznych na dalszym etapie rozwoju.

11.3 PRIMARY KEY i klucze złożone

- każda tabela posiada PRIMARY KEY,
- tabele pośrednie mają klucze złożone zapobiegające duplikacji relacji,
- tabele szczegółów odsłuchań zapewniają relację 1:1 z PlaybackHistory.

11.4 FOREIGN KEY

- zapewnienie integralności referencyjnej pomiędzy encjami (Users–Countries, Songs–Albums/Genres/Producers, Podcasts–Categories/Languages, PlaybackHistory–Users/DeviceTypes itd.).

11.5 NOT NULL i DEFAULT

- wymuszenie kompletności danych (NOT NULL),

- automatyczne wartości dla dat i liczników (DEFAULT).
